Letter of Intent

Metrology research for the development and validation of design rules for engineering of nanostructured and nano-enabled materials and devices

Dear Sir or Madam,

herewith I am confirming that the development and the promotion of pre-standardization of an innovative, highly reproducible and automated family of protocols for the measurement and analysis of residual stress on micro/nanostructured and amorphous materials at the (sub)micron-scale as planned within the project coordinated by Marco Sebastiani, Ph.D. (University of Rome "Roma TRE", Mechanical and Industrial Engineering Department) "Pre-standardisation of incremental FIB micro-milling for intrinsic stress evaluation at the sub-micron scale" is of interest for us.

Yours sincerely

GLOBALFOUNDRIES Dresden Module One LLC & Co. KG
